

Proven Performance and Reliability

SCPP 2 Circumferential Piston Pump

Application

The SCPP range of positive displacement pumps have been designed for use on a wide range of appllications within:

Dairy, Food, Beverage, Pharma and Personal Care markets. The highly efficient design is particularly suited to applications that are low in viscosity with medium to high discharge pressures.

Clean-In-Place

Optional internal flush ports for increased exposure of O-rings and rotor hubs to the flushing liquid. A flat body profile is also available which allows drainability when pump ports are in the vertical position

Standard Design

Pump Gearbox The SCPP pump with its circumferential piston pump design concept has a cast iron gearbox which provides maximum shaft ridgity. Gear box is powder-coated. 17-4 PH High-Strength steel shafts on all sizes. Four-way mounting allows horizontal or vertical porting and provides mounting flexibility.

Pumphead Construction The SCPP in standard specification has pump casing in AISI 316 stainless steel with an internal surface finish of Ra 32/Ra 0.8 complying to 3A standards. Rotors are made of special non-galling alloy and are available as standard with twin-wing form or optionally with single wing for handling large solids. Seal options include single mechanical seal or double mechanical seal with flush.

Hot clearances required for high temperature operation.

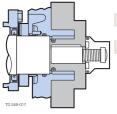

Materials of Construction

Pump gearbox – high quality grey cast iron. Pumphead – product wetted components in 316L and rotors in special non-galling material. Product wetted elastomers EPDM, NBR, FPM all FDA conforming. Also PTFE for chemical applications.

Shaft Sealing Options

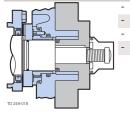

... for different liquids and conditions of service

Single Mechanical Seals

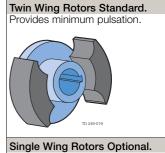

S		
-	Standard Seal Faces:	SiC/SiC
-	Standard O-rings and Cover Seals:	Buna
-	Optional Faces:	Carbon, Ceramic
-	Optional O-rings and Cover Seals:	FPM, EPDM, Silicone

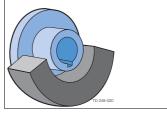

Double Mechanical Seals with Flush

with r laon	
Standard Seal Faces:	SiC/SiC
Standard O-rings and Cover Seals:	Buna
Optional Faces:	Carbon, Ceramic
Optional O-rings and Cover Seals:	FPM, EPDM, Silicone

Provides reduced shear on shear sensitive fluids or large solids such as fruit pieces, nut kernels, cheese curds or meats.

Remanufacturing Value

We offer unrivaled value by remanufacturing worn Alfa Laval or competitor circumferential piston pumps to like-new condition, providing you with increased efficiency and reduced slip for enhanced productivity. Alfa Laval will replace all parts except the cover, pump case, gear case in their remanufacturing process, and provide you a one-year warranty on the work. Machined in increments as required by wear, the pump case and cover are outfitted with corresponding oversized rotors. The SCPP 1 can be remanufactured up to 4 times, and the SCPP 2 up to three times for unmatched savings. Alfa Laval remanufacture and complete factory tests to ensure your pumps perform from day one and beyond. Best of all, having your pumps remanufactured by Alfa Laval gets you all of our improved features such as:

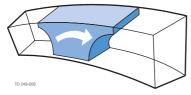

- One-piece shafts
- Helical timing gears for higher load carrying and quieter operation
- Stainless steel bearing retainers for increased corrosion resistance

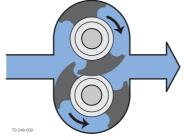

Alfa Laval Positive Displacement Circumferential Piston Pumping Principle

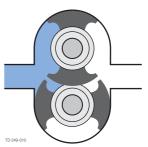

Alfa Laval rotor wings (pistons) rotate around the circumference of the channel in the pump casing. This continuously generates a partial vacuum at the suction port as the rotors unmesh, causing fluid to enter the pump. The fluid is transported around the channel by the rotor wings, and is displaced as the rotor wings converge, generating pressure at the discharge port. Direction of flow is reversible.

The deep channels in which the rotors travel provide large voids to minimize shear and bruising of solids.

The rotors are made of non-galling alloy, allowing extremely tight clearances between rotating and stationary surfaces, which ensures high efficiency and metering accuracy, even on thin liquids.

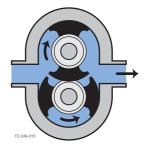

The hub of each non-galling rotor rotates in a recess in the pump head to minimize deflection even at high discharge pressures.
