Electrodeless Conductivity Sensors

- *NEMA 4X stainless steel sensor housing*
- *Electrodeless design eliminates polarization and electrode coating problems*
- *PFA Teflon®-coated probe operates at temperatures up to 392°F or 200°C*
- *Wide measuring range from 0-200 up to 0 - 2,000,000 microSiemens/cm*
- *NEMA 4X analyzer allows multiple measurements along with built-in concentration tables viewable via a clear back-lit LCD display*
- *3-A compliant; Third party verified in accordance with standard 74-02*

Anderson's Model HC1 Electrodeless Conductivity Sensors are rugged, non-fouling sensors designed for cleaning solutions with conductivity ranges from 0-200 up to 0-2,000,000 microSiemens/cm and temperature compensated over a range of 0° and 200°C. Because these sensors are electrodeless and PFA Teflon® coated, there is no instance of polarization, process coating or contamination. For greatest performance accuracy, the HC1 can be installed in a standard

2-1/2" x 2" or 3" x 2" short outlet reducing tee, or can be ordered with our 2" x 2" special Inductive Conductivity Sensor sanitary tee.

Used in conjunction with our inductive conductivity sensors, the DA1 is Anderson's panel-mount, 1/4 DIN Electrodeless Conductivity Analyzer specifically designed for CIP systems within the dairy, fluid food, beverage and/or biopharmaceutical markets.

Alternatively, users may

specify Anderson's DA2 conductivity transmitter. With an operator interface identical to that of the Analyzer, the NEMA 4X enclosed transmitter may be panel, wall, pipe or integral sensor mounted.

Detailed specifications and ordering information can be found on the reverse. For more information, visit our website, or contact our Customer Service Department at 1-800-833-0081.
